Importance of selecting an investment policy

Since each provident fund member is unique and expectations for financial returns and acceptable risk levels are different, a member should be able to select investment policies that are most suitable, yet able to change them as necessary and as one ages in life. This will enable the member's savings in the provident fund to grow sufficiently to meet financial needs upon retirement. For example, a provident fund member who is young with a provident fund that has a longer period to invest, will be very resilient to price fluctuations the investments may have. Such member can choose investment policies that contain equities to generate prospects of long term returns higher than fixed income investments. On the other hand, a provident fund member nearing retirement do not have a comparably long period remaining to invest, hence principal protection is of primary importance. This member should instead choose policies centered on fixed income investments to mitigate the loss from price fluctuations and the risk of the provident fund balance being insufficient to support retirement.

2.

Type of Member suitable for this Investment Policy

Summary of assets invested by this policy

This policy invests in master fund TMB Gold Singapore Fund which adopts a Passive Investment Strategy by holding units of the SPDR Gold Trust (a fund which invests in actual Gold Bullion) with an average weighting of at least 80% of fund NAV during the financial year. The aforementioned fund is established and

managed by World Gold Trust Services, LLC; the SPDR Gold Trust is listed on the main bourse in New York, Japan, Hong Kong, and Singapore. We trade the trust units on the Singapore exchange.

Investment Objectives

To achieve an investment return which is similar to the performance of the TMB Gold Singapore Fund.

This policy is suitable for

- Members who can accept the asset's price volatility which may increase or decline lower than the original sum invested and result in a loss.
- Members who want to diversify investment risk by investing abroad, seeking to generate financial returns similar to an investment in gold.
- Members who can accept the volatility of gold and SPDR Gold Trust prices, which are invested by the fund, as well as foreign exchange risk for the portion which is not hedged against currency risk.

This policy is not suitable for

- Members who require stable financial returns and full principal protection.
- Members who do not want to risk loss of principal from the investments.

4.

Fund performance

* Note that past performance does not guarantee future performance *

Note: Return is on a per annum basis (annualized)

1. Performance benchmark used to compare the fund managers' performance over the period measured consists of the USD-denominated LBMA Gold Price PM Index adjusted into Thai Baht as of date of performance measurement.
2. Standard Deviation (S.D.) 14.64% p.a.

5.

Investment risks

Warnings & Recommendation

The performance of this alternative investment policy contains short-term fluctuations, or can even incur a loss. However, the return over the long term can outpace inflation.

Explanation of Risk

- market risk

standard deviation : SD

- exchange rate risk

Currency Risk is the possibility that changes in exchange rate will affect the value of investment units. For example, if a mutual fund invests in securities denominated in US Dollar during Thai Baht depreciation and the units are subsequently sold when Thai Baht appreciates, the mutual fund will receive lower return in Thai Baht. On the other hand, if the same fund invests in securities denominated in US Dollar during Thai Baht appreciation and the units are subsequently sold when Thai Baht depreciates, the mutual fund will receive higher return in Thai Baht. Therefore, currency hedging techniques as follows are key tools to manage such risk.

Hedging at discretion of the fund manager: Investors may be exposed to currency risk because it is the discretion of the fund manager whether to use a currency hedging technique.

The Fund has net exposure to alternative investment assets such as gold etc., on average accounting for not less than 80% of its NAV in any accounting period.

6.
