### Importance of selecting an investment policy

Since each provident fund member is unique and expectations for financial returns and acceptable risk levels are different, a member should be able to select investment policies that are most suitable, yet able to change them as necessary and as one ages in life. This will enable the member's savings in the provident fund to grow sufficiently to meet financial needs upon retirement. For example, a provident fund member who is young with a provident fund that has a longer period to invest, will be very resilient to price fluctuations the investments may have. Such member can choose investment policies that contain equities to generate prospects of long term returns higher than fixed income investments. On the other hand, a provident fund member nearing retirement do not have a comparably long period remaining to invest, hence principal protection is of primary importance. This member should instead choose policies centered on fixed income investments to mitigate the loss from price fluctuations and the risk of the provident fund balance being insufficient to support retirement.

2.

### Type of Member suitable for this Investment Policy

- This fund invests in the TMB European Growth Fund.
- Investment assets:

This policy mainly invests in the units of the TMB European Growth Fund which only holds units of the Wellington Strategic European Equity Fund (master fund), averaging at least 80% of NAV during the financial year. The remainder of the portfolio may be invested in other assets as prescribed in the fund scheme.

- Investment policy of the foreign master fund:

The Wellington Strategic European Equity Fund seeks to generate financial returns over the long term by diversifying its investments across equities or other equity-related assets of companies listed in Europe.

### Investment Objectives

To achieve an investment return which is similar to the performance of the TMB European Growth Fund.

### This policy is suitable for

- Members who can accept stock price fluctuations which may increase or decline lower than the original sum invested and result in a loss.
- Members seeking higher long term returns than general fixed income investments.
- Members who aim for their provident fund to appreciate sufficiently to support retirement.
- Members seeking to diversify investment risk by investing in foreign markets and can accept the risk of investing in foreign equity securities or assets.

### This policy is not suitable for

- Members who require stable financial returns and full principal protection.
- Members who do not want to risk loss of principal due to investment in equities.

## Fund performance

\* Note that past performance does not guarantee future performance \*

Note : Return is on a per annum basis (annualized).

1. Performance benchmark used to compare the fund managers' performance over the period measured consists of the Euro-denominated MSCI Europe Net Total Return Index adjusted for hedging costs to translate into the Thai Baht equivalent as of date of performance measurement.
2. Standard Deviation (S.D.) 16.21% p.a.

## 5.

### Investment risks

#### Warnings & Recommendation

- The performance of a policy that invests in equities contains short-term fluctuations, or can even incur a loss. However, the return over the long term can outpace inflation.
- Wellington Strategic European Equity Fund mobilizes capital from investors in Euro and invests in several currencies according to invested countries. The master fund may enter into derivatives contracts to hedge currency risk exposures, depending on fund manager's discretion. The investment of TMB European Growth Fund in Wellington Strategic European Equity Fund is mainly denominated in Euro, so, in order to reduce such FX translation risk, TMB European Growth Fund may enter into FX swap and/or forward or futures to hedge almost all of the FX risk exposure (not less than 90% of amount invested offshore).
- Since TMB European Growth Fund will mainly invest in only master fund, which mainly invests in only region, the fund's performance may have more volatility than those of other more-diversified funds. Investors may lose or receive money less than initial amount. However, the master fund has diversification among several countries and industries, so, the volatility may be relieved to some extent.
- The Fund may invest in derivatives to efficiently manage its portfolio. Therefore, this fund has higher risk than other funds, it thus suits the type of investor who can accept higher risk for higher returns. Investors should invest in this Fund only when fully understand about derivatives and should consider

the investing experience, investment objective and financial position before investing in this Fund.

### Explanation of Risk

- market risk

standard deviation : SD

Market Risk means the risk that the values of securities which the Fund has invested may increase or decrease due to outside factors such as economic/ investment situations, political factors both internally and internationally which could be considered from the Standard Deviation (SD) of the Fund. If the Fund has a high SD, it is an indicator that the Fund has high a fluctuation from the changes in the prices of securities.

### High sector concentration risk

Remark : The concentration occurs among Industrials, HEALTH

## High country concentration risk

Remark : Remark : The concentration occurs among UNITED KINGDOM

### ■ exchange rate risk

Currency Risk is the possibility that changes in exchange rate will affect the value of investment units. For example, if a mutual fund invests in securities denominated in US Dollar during Thai Baht depreciation and the units are subsequently sold when Thai Baht appreciates, the mutual fund will receive lower return in Thai Baht. On the other hand, if the same fund invests in securities denominated in US Dollar during Thai Baht appreciation and the units are subsequently sold when Thai Baht depreciates, the mutual fund will receive higher return in Thai Baht. Therefore, currency hedging techniques as follows are key tools to manage such risk.

Fully / Almost fully hedged: Investors have no exposure to currency risk.

## Risk Spectrum of the Fund
