1.

Importance of selecting an investment policy

Since each provident fund member is unique and expectations for financial returns and acceptable risk levels are different, a member should be able to select investment policies that are most suitable, yet able to change them as necessary and as one ages in life. This will enable the member's savings in the provident fund to grow sufficiently to meet financial needs upon retirement. For example, a provident fund member who is young with a provident fund that has a longer period to invest, will be very resilient to price fluctuations the investments may have. Such member can choose investment policies that contain equities to generate prospects of long term returns higher than fixed income investments. On the other hand, a provident fund member nearing retirement do not have a comparably long period remaining to invest, hence principal protection is of primary importance. This member should instead choose policies centered on fixed income investments to mitigate the loss from price fluctuations and the risk of the provident fund balance being insufficient to support retirement.

2.

Type of Member suitable for this Investment Policy

- This policy invests in master fund TMB Asset Allocation Long Term Fund.
- The TMB Asset Allocation Long Term Fund will invest in equities, hybrid securities, fixed income instruments, cash deposits and securities or other assets or other means of generating financial returns, or a combination of the aforementioned, either local or foreign. Foreign investments will be capped at no more than 79% of fund NAV. Equity holdings will be subjected to the discretion of the asset management company, given the prevailing investment climate and market conditions in accordance with the fund scheme.

Investment Objectives

To achieve an investment return which is similar to the performance of the TMB Asset Allocation Long Term Fund.

This policy is suitable for

- Members who can accept price volatility of equities which may increase or decline lower than the original sum invested and result in a loss.
- Members seeking higher long term returns than fixed income investments.
- Members who aim for their provident fund to appreciate sufficiently to support retirement.

This policy is not suitable for

- Members who do not want to risk loss of principal due to investment in equities.
- Members who expect high financial returns.

 - 4) SET Total Return Index (50%) and
 - 5) SET Property and REIT Total Return Index (15%)
2. Standard Deviation (S.D.) 14.01 % p.a.

5.

Investment risks

Warnings & Recommendation

- A flexible policy's performance may fluctuate in the short-term, or even incur a loss. However, the return over the long term can outpace inflation.
- The Fund may invest in derivatives to efficiently manage its portfolio. Therefore, this fund has higher risk than other funds
- Investors should invest in this Fund only when fully understand about derivatives and should consider the investing experience, investment objective and financial position before investing in this Fund.
- In the event that there is any redemption of Investment Units more than two-third of the total investment units sold, the Management Company shall use its discretion to dissolve the Fund and stop accepting subscription/ redemption order.

Explanation of Risk

- credit risk

National Credit Rating

Gov.bond / AAA	AA, A	BBB	Below BBB	Unrated
Low				High

■ market risk

portfolio duration : *This fund has a portfolio duration of 0.54years (information as of 30 December 2021)*

standard deviation : SD

Market Risk means the risk that the values of securities which the Fund has invested may increase or decrease due to outside factors such as economic/ investment situations, political factors both internally and internationally which could be considered from the Standard Deviation (SD) of the Fund. If the Fund has a high SD, it is an indicator that the Fund has high a fluctuation from the changes in the prices of securities.

High issuer concentration risk

- exchange rate risk

Currency Risk is the possibility that changes in exchange rate will affect the value of investment units. For example, if a mutual fund invests in securities denominated in US Dollar during Thai Baht depreciation and the units are subsequently sold when Thai Baht appreciates, the mutual fund will receive lower return in Thai Baht. On the other hand, if the same fund invests in securities denominated in US Dollar during Thai Baht appreciation and the units are subsequently sold when Thai Baht depreciates, the mutual fund will receive higher return in Thai Baht. Therefore, currency hedging techniques as follows are key tools to manage such risk.

Hedging at discretion of the fund manager: Investors may be exposed to currency risk because it is the discretion of the fund manager whether to use a currency hedging technique.
